B Series Control Panels

**BOSCH**

Invented for life

## B:more:secure

Get more for your security investment. Your home is one of your most important assets, and you want the most value from your security system. B Series control panels give you more with a flexible, integrated platform for intrusion and fire detection that is easy to use and can even be operated from your smart phone.

## **B:**more:personal

With B Series, you determine the security plan that fits best with your family's activities and schedules. You can control individual rooms or up to four distinct areas of your home or property — arm or disarm a guest area, sunroom, kitchen or detached garage without affecting other rooms. Secure the front of the house while you enjoy the backyard. B Series can even signal you when your child arrives home from school.

## **B:**more:at ease

Each B Series control panel works around the clock checking for open windows and doors, monitoring smoke detectors and performing other services to keep your home and family secure. It provides safeguards against fire, carbon monoxide (CO) gas, burglars, vandalism and more.

And, with event notifications — such as alarms, or temperature or CO gas level warnings — sent direct to your mobile phone, you're always kept up to date on the status of your home. With B Series, you can keep an eye on your family and property, even when you're not there.

## B:more:intuitive

Custom functions tailor the system to your needs and provide simple operation. Set the system to arm the first floor when you go to bed. Program a scheduled event to ensure your garage door is closed at a pre-set time each night. B Series can be programmed to carry out multiple functions with a single keypad command.

Bosch keypads guide you through system control with just a few simple steps. Or, you can arm and disarm the system with a wireless keyfob — making access easy when your hands are full, you're in a hurry or you have limited strength or mobility.

Convenient Wireless Keyfob

## B:more:connected

Use your home's Internet connection to send alarm transmissions to the central monitoring station — eliminating the need for a phone line and reducing your costs. B Series supports both current and future Internet Protocols to ensure your investment is protected as technology changes. Or, you can use cellular for complete wireless communication. With B Series' plug-in modules, you have the flexibility to choose the connection that works best with your home and its existing technology.

With our Remote Security Control app, you can also operate your system from your iPhone, iPad or iPod touch. Arm or disarm the system, check system status and control monitored points using your hand-held device over the Internet or through your local wireless network.

## B:more:reliable

Bosch employs the highest standards to ensure quality and performance. Each B Series panel has also passed rigorous testing by Underwriters Laboratory (UL), an independent product safety testing and certification organization.

## B:more:confident

Invest in a B Series panel and get more for your home and your family. To learn more, visit [www.boschsecurity.us](http://www.boschsecurity.us) to locate a certified dealer in your area.
